THBT companies should become public companies when they want to grow.

- ☐ **public company** n. 상장 기업
- ☐ **investor** n. 투자자
- ☐ **loan** n. 대출, 융자
- ☐ **founder** n. 창업자
- ☐ **unstable** adj. 불안정한
- ☐ **IPO** n. 기업공개, 상장; Initial Public Offering의 약자
- ☐ **private company** n. 비상장 기업
- ☐ **professional** adj. 전문적인
- ☐ **pressure** n. 압박
- ☐ **reusable** adj. 재사용 가능한

DAY 1

Learning about the Topic

Brainstorming

Motion **THBT companies should become public companies when they want to grow.**

key terms

public companies: companies listed on the stock market

Think about the Motion!

1. Why does a company go public?

Answers may vary

2. What benefits can a company gain by not going public?

Answers may vary

Vocabulary

Write the correct word for each definition and make a sentence using the word.

public company	investor	loan	founder	unstable
IPO	private company	professional	pressure	reusable

1. (founder) : a person who starts a company or organization

e.g _____

2. (pressure) : a strong force or demand that makes someone do something

e.g _____

3. (private company) : a company whose shares are not sold to the public

e.g _____

4. (loan) : money that you borrow and must pay back later

e.g _____

5. (reusable) : able to be used again

e.g _____

6. (public company) : a company whose shares can be bought and sold by the public

e.g _____

7. (unstable) : likely to change suddenly or become worse

e.g _____

8. (IPO) : the first time a company sells its shares to the public

e.g _____

9. (investor) : a person or group that gives money to a company to make a profit

e.g _____

10. (professional) : done in a skilled and serious way

e.g _____

Motion **THBT companies should become public companies when they want to grow.**

Purpose To help students understand the advantages and disadvantages of public and private companies.

Background

When a company wants to grow, it needs more money. It may need money to build factories, hire workers, make new products, or sell things in other countries.

One way to get this money is to become a **public company**. When a company goes public, many people can buy small parts of the company. These small parts are called shares. In this way, the company can get a lot of money from many **investors**.

However, going public is not the only way. A company can also get money from private investors or banks. Also, going public changes how a company makes decisions. A public company must show important information to people. It is checked by investors and the market. This can make the company more open and careful, but it can also make the company worry too much about quick results.

So, we can think about this motion in two ways. First, is going public the best way to get money for growth? Second, does going public help a company make better decisions?

Perspective 1 : Investment

Pro (Going Public Helps Companies Get More Money)

[Assertion] Going public is a powerful way for a company to get a lot of money.

[Reasoning] Growth costs a lot of money. A company may need money to build more factories, make new technology, and hire smart workers. If a company goes public, many people can invest in it. This means the company can get a large amount of money.

Also, money from selling shares is different from a bank **loan**. A bank loan must be paid back. The company also has to pay interest. But money from selling shares does not have to be paid back in the same way. So, going public can give a company more stable money.

[Evidence] Amazon is a good example. Amazon went public in 1997. After that, it

got money from public investors. With this money, Amazon could build warehouses, improve technology, and start new businesses. It grew from a small online bookstore into a huge global company.

Con (Companies Can Grow Without Going Public)

[Assertion] A strong company can grow without becoming a public company.

[Reasoning] Going public is not the only way to get money. A company can get money from private investors or banks. If it borrows money from a bank, the **founder** does not have to give away shares. This means the founder can keep more control of the company.

Also, going public costs a lot of money and brings many rules. A public company must show a lot of information to the public. Its stock price can also go up and down. This can make the company **unstable**.

If a company has very strong technology, private investors may still want to invest in it. So, the company can grow without an **IPO**.

[Evidence] SpaceX is a good example. For many years, SpaceX was a **private company**. It still got money from private investors and grew very fast. It worked on rockets, satellites, and space technology. SpaceX later became public, but much of its big growth happened while it was still private.

Perspective 2 : Decision-making

Pro (Going Public Makes Companies More Careful)

[Assertion] Going public can make a company's decisions more open and **professional**.

[Reasoning] A public company must show important information about its money and business. Because of this, people can check whether the company is doing well.

Also, a public company is not usually controlled by only one person. A group of people checks big decisions. This can stop one founder from making careless choices alone.

In this way, going public can help a company make more careful and responsible decisions.

[Evidence] Meta is a good example. Meta went public in 2012. After that, it had to follow public company rules. It had to show important information and make decisions more carefully. Under this system, Meta continued to grow. It bought WhatsApp in 2014 and invested in new areas such as AI and technology.

Con (Private Companies Can Make Faster and Bolder Decisions)

[Assertion] Private companies can make faster decisions and try bigger ideas.

[Reasoning] A public company is checked by the stock market every three months. Because of this, managers may worry too much about quick results and stock prices. They may not want to take big risks.

However, a private company does not have the same **pressure**. It can think more about the future. It can spend money on difficult projects, even if those projects may fail at first.

So, a private company can move faster and make bold long-term choices.

[Evidence] SpaceX shows this point well. SpaceX had many rocket test failures. If it had been a public company from the beginning, investors might have been very worried. The stock price might have fallen.

However, because SpaceX was private, it could keep trying. It invested in **reusable** rockets, Starlink, and space exploration. These projects were risky, but they helped SpaceX grow. This shows that private companies can sometimes make bold decisions more easily.

Reading Comprehension

1. In the investment part, why does the Pro side say companies should go public when they want to grow?

The Pro side says companies should go public because companies need a lot of money to grow. They may need money to build factories, hire workers, and make new products. When a company goes public, many people can buy shares. In this way, the company can get a lot of money from many investors.

2. In the investment part, what example does the Pro side give for going public?

The Pro side gives Amazon as an example. Amazon went public in 1997. After that, Amazon got money from public investors. With this money, Amazon built warehouses, improved technology, and started new businesses. It grew from a small online bookstore into a huge global company.

3. Why does the Con side say companies do not always need to go public?

The Con side says companies do not always need to go public because there are other ways to get money. A company can get money from private investors or banks. If the company has strong technology, private investors may still want to invest in it. So, the company can grow without becoming public.

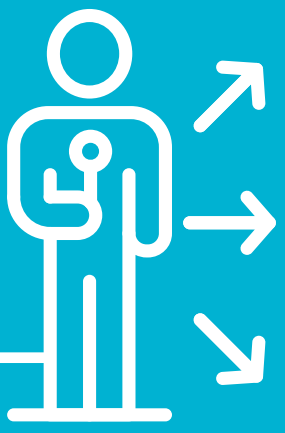

4. Why does the Pro side say going public can help a company make better decisions?

The Pro side says going public can help a company make better decisions because a public company must show important information to people. Investors and the market can check the company. Also, big decisions are usually checked by a group of people. This can make the company more open and careful.

5. Why does the Con side say private companies can make bolder decisions?

The Con side says private companies can make bolder decisions because they do not have to worry as much about stock prices. Public companies may worry too much about quick results. However, private companies can think more about the future. They can try risky projects and keep working even when they fail at first.

DAY 2

Clash Points

Figure out the Clash Points VS ↔

In terms of Investment

1 Proposition argues that:

Going Public Gives Companies More Money

When companies want to grow, they need a lot of money. They may need money to build factories, hire workers, make new products, and sell things in other countries. Going public is a powerful way to get this money because many people can buy shares and invest in the company.

Also, money from selling shares is different from a bank loan. A bank loan must be paid back with interest, but money from selling shares does not have to be paid back in the same way. Therefore, going public can give companies strong and stable money for growth.

Rebuttals Money from Shares Is Not Free

Going public can bring a lot of money, but it is not always the best way to grow. A company must give shares to many investors, so the founder may lose some control. Also, going public costs a lot, brings many rules, and makes the company worry about stock prices. Therefore, public money is useful, but it is not always the safest way to grow.

In terms of Investment

1 Opposition argues that:

Companies Can Grow Without Going Public

Companies do not always need to go public when they want to grow. They can get money from private investors or banks. If a company borrows money from a bank, the founder does not have to give away shares and can keep more control.

Also, if a company has strong technology, private investors may still want to invest in it. So, the company can grow without an IPO. Therefore, staying private can sometimes be a better way for a company to grow.

Rebuttals Private Money May Not Be Enough

Some strong companies can grow without going public, but this is not easy for every company. Private investors do not invest in all companies, and bank loans must be paid back with interest. If a company wants to grow very big, it may need money from many more investors. Therefore, private money can help, but it may not be enough for large growth.

Figure out the Clash Points VS ↔

In terms of Decision-making

2 Proposition argues that:

Going Public Makes Companies More Careful

Going public can make a company's decisions more open and careful. A public company must show important information about its money and business. Because of this, investors and the market can check whether the company is doing well.

Also, a public company is not usually controlled by only one person. A group of people checks big decisions. This can stop one founder from making careless choices alone. Therefore, going public can help a company make more responsible decisions.

Rebuttals Too Much Pressure Can Hurt Good Decisions

Being open and checked by others can be helpful, but it does not always make decisions better. A public company may worry too much about quick results and stock prices. Because of this, managers may avoid risky but important projects. Therefore, going public can make decisions more open, but it can also make companies less bold.

In terms of Decision-making

2 Opposition argues that:

Private Companies Can Make Faster and Bolder Decisions

Private companies can make faster decisions and try bigger ideas. A public company is checked by the stock market every three months, so managers may worry too much about quick results. However, a private company does not have the same pressure.

A private company can think more about the future. It can spend money on difficult projects, even if they may fail at first. Therefore, staying private can help companies make bold long-term choices.

Rebuttals Too Much Freedom Can Be Dangerous

Private companies may have more freedom, but freedom does not always mean better decisions. If there are not enough checks, one founder or a small group of leaders may make risky decisions alone. A public company must follow rules and show important information. Therefore, public companies can sometimes make more balanced and responsible decisions.

DAY 3

Step 1: Finish Your Template

1. Prepare your arguments for both sides at home.
2. Listen to your friend's ideas and add the teacher's tips to complete your template.

Step 2: Practice with a Partner

1. Pair up with a classmate.
2. Take turns being Proposition and Opposition and role-play the debate, using your templates.

Mock Debate Drill

Government

The Government side proposes and defends the motion. The members of the Government side are the following:

1. PM (Prime Minister)

State that you support the motion and present one or two main arguments for the Government side.

2. DPM (Deputy Prime Minister)

Rebut LO's arguments and strengthen PM's Government-side logic. Add extra examples if needed.

3. GW (Government Whip)

Summarize the key issues of the debate and explain why the Government side is more persuasive. Do not add new arguments.

Opposition

The Opposition side refutes and negates the motion. The members of the Opposition side are the following:

1. LO (Leader of Opposition)

State that you oppose the motion and present one or two main arguments for the Opposition side.

2. DLO (Deputy Leader of Opposition)

Rebut PM's arguments and strengthen LO's Opposition-side logic. Add extra examples if needed.

3. OW (Opposition Whip)

Summarize the key issues of the debate and explain why the Opposition side is more persuasive. Do not add new arguments.

Prime Minister

Hello everyone, I am the Prime Minister. First, let me introduce to you the motion of the debate.

Today, I strongly support the motion that companies should become public companies when they want to grow.

First, from an investment perspective, going public helps companies get a lot of money. When companies want to grow, they need money to build factories, hire workers, make new products, and sell things in other countries. If a company goes public, many people can buy shares and invest in the company. In this way, the company can get a large amount of money.

Also, money from selling shares is different from a bank loan. A bank loan must be paid back, and the company also has to pay interest. However, money from selling shares does not have to be paid back in the same way.

For example, Amazon went public in 1997. After that, Amazon got money from public investors. With this money, Amazon built warehouses, improved technology, and started new businesses. As a result, Amazon grew from a small online bookstore into a huge global company.

Now let us look at the decision-making perspective. Going public can make a company's decisions more open and careful. A public company must show important information about its money and business. Because of this, investors and the market can check whether the company is doing well.

Also, a public company is not usually controlled by only one person. A group of people checks big decisions. This can stop one founder from making careless choices alone.

For example, Meta went public in 2012. After that, Meta had to follow public company rules and show important information. Under this system, Meta continued to grow. It bought WhatsApp in 2014 and invested in new areas such as AI and technology.

In conclusion, companies should become public companies when they want to grow. Going public helps companies get a lot of money and make more careful decisions. Therefore, I strongly support the motion.

Leader of Opposition

Hello everyone, I am the Leader of Opposition, and I stand firmly against the motion.

Today, I strongly oppose the motion that companies should become public companies when they want to grow.

First, from an investment perspective, companies do not always need to go public to grow. Going public is not the only way to get money. A company can get money from private investors or banks. If a company borrows money from a bank, the founder does not have to give away shares. This means the founder can keep more control of the company.

Also, if a company has very strong technology, private investors may still want to invest in it. So, the company can grow without an IPO.

Going public can also bring problems. It costs a lot of money and brings many rules. A public company must show a lot of information to people. Its stock price can also go up and down. This can make the company worry too much about the stock market.

For example, SpaceX shows that a company can grow without going public. For many years, SpaceX was a private company. It still got money from private investors and grew very fast. It worked on rockets, satellites, and space technology.

Now let us look at the decision-making perspective. Private companies can make faster and bolder decisions. A public company is checked by the stock market every three months. Because of this, managers may worry too much about quick results and stock prices. They may not want to take big risks.

However, a private company does not have the same pressure. It can think more about the future. It can spend money on difficult projects, even if those projects may fail at first. SpaceX could keep trying risky projects such as reusable rockets and Starlink because it was private.

In conclusion, companies should not always become public companies when they want to grow. Companies can get money in other ways, and private companies can make faster and bolder decisions. Therefore, I strongly oppose the motion.

Deputy Prime Minister

Hello everyone, I am the Deputy Prime Minister.

I will first rebut the Opposition LO's arguments and then reinforce the Government's position.

The Leader of Opposition argues that companies can grow without going public because they can get money from private investors or banks. However, this is not easy for every company. Private investors do not invest in all companies. They usually choose companies that look very strong or special. Bank loans can also be difficult because the company must pay the money back with interest.

By going public, a company can get money from many more investors. This is important when a company needs a lot of money to build factories, sell things in other countries, make new technology, or start new businesses. Therefore, going public can give companies stronger and more stable money for growth.

The Leader of Opposition also argues that private companies can make bolder decisions. However, too much freedom can be dangerous. If there are not enough checks, one founder or a small group of leaders may make risky decisions alone. This can lead to poor management or wasteful spending.

Now let me support the Government's position. From an investment perspective, going public gives companies strong money for growth. Growth requires a lot of money, and public investors can help provide that money.

From a decision-making perspective, going public also makes companies more open and responsible. Public companies must show important information, follow rules, and have big decisions checked by a group of people. This can make managers more careful.

Therefore, companies should become public companies when they want to grow. Going public supports both financial growth and better decision-making.

Deputy Leader of Opposition

Hello everyone, I am the Deputy Leader of Opposition.

I will rebut the PM's arguments and reinforce the Opposition's position.

The Prime Minister argues that going public is a powerful way to get money for growth. However, this does not mean going public is always the best way. Money from shares is not free. Even if the company does not have to pay it back like a bank loan, it must give shares to many investors. This can make the founder lose some control of the company.

Going public can also create pressure from the stock market. The company may worry too much about stock prices and quick results.

The Prime Minister also argues that going public improves decision-making because public companies must show information and follow rules. However, being checked by others does not always make decisions better. A public company may become too careful. Managers may avoid risky but important projects because they are worried about stock prices.

Now let me support the Opposition's position. From an investment perspective, strong companies can grow without going public. They can get money from private investors or banks. This allows them to raise money while keeping more control.

From a decision-making perspective, private companies can make faster and bolder decisions. They do not have to worry about public investors every three months. This gives them more freedom to try difficult long-term projects.

Therefore, companies should not always become public companies when they want to grow. The real question is not whether companies need money. The real question is whether going public is always the best way to grow.

Government Whip

Hello everyone, I am the Government Whip.

The Opposition argues that companies can grow without going public. However, this argument focuses too much on a few special companies. Most growing companies need a lot of money to build factories, hire workers, make products, and sell things in other countries. Private money can help some companies, but it may not be enough.

From an investment perspective, going public helps companies get money from many investors. This gives companies strong financial power. It is especially helpful when companies want to grow quickly and compete with other companies around the world.

From a decision-making perspective, going public also makes companies more careful. Public companies must show important information and follow rules. Investors, the market, and a group of people can check big decisions. This can stop careless choices and make management more responsible.

Therefore, the key issue in this debate is not whether private companies can sometimes grow. The real issue is whether going public gives companies more money and better decision-making systems when they want to grow. For these reasons, companies should become public companies when they want to grow.

Opposition Whip

Hello everyone, I am the Opposition Whip.

The Government argues that going public helps companies get a lot of money and make better decisions. However, this argument ignores the problems of becoming public. Public money is not free. When a company sells shares, it gives part of the company to public investors. It also faces pressure from the stock market.

From an investment perspective, companies do not always need to go public to grow. Strong companies can get money from private investors or banks. These methods can give companies money while allowing the founder to keep more control. Going public can also bring high costs, many rules, and stock price changes.

From a decision-making perspective, public companies may become less bold. Because they are checked every three months, managers may focus too much on quick results and stock prices. This can make them avoid risky but important long-term projects. Private companies, however, can move faster and continue difficult projects even when they fail at first.

Therefore, the key issue in this debate is not whether going public can help some companies. The real issue is whether companies should always become public when they want to grow. Since private companies can also get money and make bold long-term decisions, companies should not always become public companies when they want to grow.

Debate Instructions to Judges

DIRECTIONS:

In the Simson debate, the winning team is the one with the most points—there are no low-point wins. Use the guidelines below to determine your scores.

STANDARDS FOR SCORING:
Every speech is scored out of a possible 83 points.

Note: For purposes of consistency, scores should be between 67 and 83 for the three speeches per team. Judges should not go outside this range.

You may give or take away 1 or 2 points, per debater, for strong/weak offering and receiving of Points of Information.

81-83	• Brilliant arguments successfully engage with the main issues in the round. • Arguments are very well-explained, always central to the case being advocated, and demand extremely sophisticated responses. • The speech is very clear and incredibly compelling. Structure and role fulfillment are executed flawlessly.
79-80	• Very good, central arguments engage well with the most important issues on the table and are highly compelling; sophisticated responses would be required to refute them. • Delivery is clear and very persuasive. Role fulfillment and structure are probably flawless.
77-78	• Relevant and pertinent arguments address key issues in the round with sufficient explanation. • The speech is clear in almost its entirety, and holds one's attention persuasively. • Role is well-fulfilled and structure is unlikely to be problematic.
74-76	• Arguments are almost exclusively relevant, and frequently persuasive. Occasionally, but not often, the speaker may slip into: i) deficits in explanation, ii) simplistic argumentation vulnerable to competent responses, or iii) peripheral or irrelevant arguments. • The speaker holds one's attention, provides clear structure, and successfully fulfills their basic role on the table.
72-73	• Arguments are generally relevant, and some explanation of them given, but there may be obvious gaps in logic, multiple points of peripheral or irrelevant material and simplistic argumentation. • The speaker mostly holds the audience's attention and is usually clear, but rarely compelling, and may sometimes be difficult to follow. • There is a decent but incomplete attempt to fulfill one's role on the table, and structure may be imperfectly delivered.
70-71	• Relevant arguments are frequently made, but with very rudimentary explanation. • The speaker is clear enough to be understood the vast majority of the time, but this may be difficult and/or unrewarding. • Structure poor; poor attempt to fulfill role.
69	• The speaker is often relevant, but rarely makes full arguments. • Frequently unclear and confusing; really problematic structure/lack thereof; some awareness of role.
68	• The speech rarely makes relevant claims, only occasionally formulated as arguments. • Hard to follow, little/no structure; no evident awareness of role.
67	• No structure or fulfillment of role in any meaningful sense is provided, OR did not speak at all.

What is a POI?

A POI means **Point Of Information**
It is something you raise during the speech of your opponent when something in their speech doesn't add up or when you want a clarification to something they have said.

A POI is a very important part of a debate since you get to either rebut or question your opponents arguments or definitions in real time!

You may raise a POI by respectfully saying "point" and raising your right hand during your opponent's speech.

You may raise a point after your opponents first definition or argument.
If your opponent has not introduced any definitions or arguments you may not raise a point, since there is nothing to clarify in that case.

But, note that all speakers have the freedom to accept or reject any offered POI's.

So if your POI has been denied please respect the speaker for doing so.

Let's Make a POI!

↳ Example

Intro

I agree with the motion that companies should become public companies when they want to grow.

Body 1

The most important reason is that going public helps companies get a lot of money.

I think this is important because companies need money to build factories, hire workers, and make new products. When a company goes public, many people can buy shares and invest in it.

For example, Amazon went public in 1997. After that, it got money from public investors and grew from a small online bookstore into a huge global company.

Body 2

The next important reason is that going public can make companies more careful.

I believe this matters because public companies must show important information. Investors and the market can check whether the company is doing well.

For example, Meta went public in 2012. After that, it had to follow public company rules and show important information.

Conclusion

In conclusion, I agree with the motion because going public helps companies get money and make more careful decisions.

Therefore, companies should become public companies when they want to grow.
