2026 SUMMER

SIMSON DEBATE

Jul. B

THBT companies' excess profits should be distributed to workers before shareholders.

- ☐ **capitalism** n. 자본주의
- ☐ **shareholder** n. 주주
- ☐ **dispute** n. 분쟁, 갈등
- ☐ **agreement** n. 합의, 협약
- ☐ **semiconductor** n. 반도체
- ☐ **asset** n. 자산
- ☐ **subcontract** v. 하청을 주다
- ☐ **motivation** n. 동기, 의욕
- ☐ **loyalty** n. 충성심, 충성도
- ☐ **burden** n. 부담

DAY 1

Learning about the Topic

Brainstorming

Motion **THBT companies' excess profits should be distributed to workers before shareholders.**

key terms

distribute: to give something out to several people or groups

shareholders: a person who owns shares in a company

Think about the Motion!

1. When a company earns large excess profits, who should receive them first: workers or shareholders?

Answers may vary

2. From a company's point of view, who is more beneficial to reward first: workers or shareholders?

Answers may vary

Vocabulary

Write the correct word for each definition and make a sentence using the word.

capitalism	shareholder	dispute	agreement	semiconductor
asset	subcontract	motivation	loyalty	burden

1. (loyalty) : a strong feeling of support for a person, group, or company

   e.g _____

2. (semiconductor) : a material used to make computer chips and electronic parts

   e.g _____

3. (burden) : something difficult or heavy that you have to deal with

   e.g _____

4. (agreement) : a decision or promise made by two or more people or groups

   e.g _____

5. (capitalism) : an economic system where people and companies own businesses and try to make profit

   e.g _____

6. (subcontract) : to pay another company or person to do part of a job

   e.g _____

7. (shareholder) : a person who owns shares in a company

   e.g _____

8. (motivation) : a reason or feeling that makes someone want to do something

   e.g _____

9. (asset) : something valuable that a person or company owns

   e.g _____

10. (dispute) : an argument or disagreement between people or groups

    e.g _____

Motion **THBT companies' excess profits should be distributed to workers before shareholders.**

Purpose To examine how companies should balance fairness and economic growth when deciding whether excess profits should go first to workers or shareholders.

Background

In modern **capitalism**, when a company makes more profit than expected, it can use that money in many ways. It can give money to **shareholders**, spend money on research and development, grow its business, or give bonuses and higher wages to workers. Shareholders say they deserve profits because they give money to the company and take financial risks. Workers say they also deserve a fair share because they create value through their work.

This issue became more important in South Korea because of the Samsung Electronics labor **dispute**. In 2026, Samsung Electronics and its labor union reached a temporary wage **agreement** after months of conflict. Under the agreement, Samsung decided to create a special bonus system for its **semiconductor** division. This bonus would come from part of the division's operating profit. In other words, part of the company's success would be shared directly with workers.

This case shows the main question of this debate. If workers help create a company's excess profits, should they receive those profits first as bonuses and higher wages? Or should shareholders receive them first because they invested money and took financial risks?

Perspective 1 : Social

Pro (Fair Reward for Labor)

Companies' excess profits should go to workers before shareholders because this can make society fairer and reduce income inequality.

The reason why this is important is that workers help a company succeed. They make products, provide services, and keep the company running every day. So, if a company makes more profit than expected, some of that excess profit should go back to the workers.

Also, shareholders often invest with money they already have, but many workers

depend on wages to live. If excess profits go only to shareholders, the gap between rich **asset** owners and workers can become bigger. However, if companies share those profits with workers, workers' lives can improve.

For example, the Samsung Electronics labor dispute shows this point. Samsung reached a wage agreement with its labor union, and it included performance bonuses. This shows that workers' contribution was reflected in the agreement.

Con (New Inequality Among Workers)

Companies' excess profits should not go to workers before shareholders because this policy may create new unfairness among workers.

The reason why this can be a problem is that companies with large excess profits are usually big or very successful companies. Their workers often already get higher wages and better benefits than workers in small businesses, subcontractors, or temporary jobs. If these workers get excess profits first, the benefit will stay inside successful companies.

This can make other workers feel left out. Also, it is unclear who should get the benefit. Should only regular workers get it? Should **subcontracted** or temporary workers get it too? This can create another fairness problem.

For example, the Samsung Electronics performance bonus issue in 2026 shows this problem. Reports said that semiconductor workers could get large bonuses, but other workers were excluded. Also, in capitalism, risk and reward are important. Since shareholders take financial risks by investing money, excess profits should mainly return to shareholders.

Perspective 2 : Economic

Pro (More Consumption and Productivity)

Companies' excess profits should go to workers before shareholders because this can increase spending, improve worker **motivation**, and help the economy.

The reason why this is economically helpful is that workers are more likely to spend extra money on daily needs, such as food, housing, education, and services. On the other

hand, wealthy shareholders may save the money or invest it. Therefore, when excess profits go to workers, the money returns to the market faster and increases demand.

Also, sharing profits with workers can increase their motivation and **loyalty** to the company. This can improve productivity and reduce turnover. From a company's point of view, this is not just a cost. It is an investment in workers.

For example, profit-sharing systems and employee stock ownership plans, or ESOPs, can make workers care more about company performance. The efficiency wage theory also says that better rewards can increase worker motivation and productivity. Therefore, sharing excess profits with workers can increase both spending and productivity.

Con (Less Investment and Growth)

Companies' excess profits should not go to workers before shareholders because this can reduce investment and weaken long-term economic growth.

The reason why this is dangerous is that if shareholders receive less money, companies may become less attractive to investors. Investors usually move their money to places where they can earn higher returns. Therefore, if excess profits are given to workers first, companies may have more difficulty raising money for future growth.

Also, sharing excess profits can become a long-term **burden**. Once workers receive large bonuses, it may be hard to reduce them later, even when the economy gets worse. Then, companies may have less money for facilities, research and development, new technology, and future jobs.

For example, the Samsung Electronics performance bonus issue in 2026 shows this concern. The discussion about large bonuses came when the company also needed huge investment in semiconductor facilities, research and development, and AI-based automated factories. If those profits were used for investment or shareholder returns, they could have helped the company prepare for future competition. Therefore, giving excess profits to workers first may use up money needed for long-term growth.

Reading Comprehension

1. Why does the Pro side argue that companies' excess profits should go to workers first from a social perspective?

The Pro side argues that companies' excess profits should go to workers first because workers help the company succeed. They make products, provide services, and keep the company running every day. Therefore, when a company makes more profit than expected, it is fair to share some of that profit with workers.

2. How does the Pro side argue that giving excess profits to workers can reduce income inequality?

The Pro side argues that giving excess profits to workers can reduce income inequality because many workers depend on wages to live. However, shareholders often invest with money they already have. If excess profits go only to shareholders, the gap between rich asset owners and workers can become bigger.

3. Why does the Con side argue that giving excess profits to workers first may create new unfairness among workers?

The Con side argues that this policy may create new unfairness because workers in big and successful companies often already receive higher wages and better benefits. However, workers in small businesses, subcontractors, or temporary jobs may not receive the same benefit. As a result, the benefit may stay only inside successful companies.

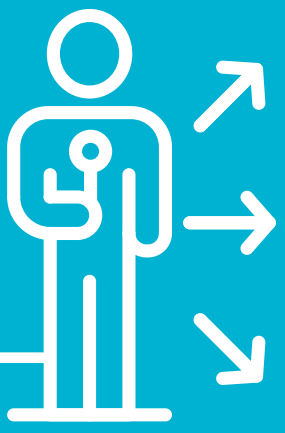

4. Why does the Con side argue that shareholders should receive excess profits first?

The Con side argues that shareholders should receive excess profits first because they provide money to the company and take financial risks. If the company fails, shareholders can lose their money. Therefore, when the company earns excess profits, shareholders should be rewarded for their risk.

5. Why does the Con side argue that distributing excess profits to workers first may weaken long-term growth?

The Con side argues that distributing excess profits to workers first may weaken long-term growth because companies may have less money for future investment. They may have less money for facilities, research and development, new technology, and future jobs. Also, if shareholders receive less reward, companies may become less attractive to investors.

DAY 2

Clash Points

Figure out the Clash Points VS ↔

In terms of Social

1 Proposition argues that:

Fair Reward for Labor

Workers help a company succeed by making products, providing services, and keeping the company running every day. Therefore, when a company makes more profit than expected, it is fair that workers receive some of those excess profits before shareholders. Many workers depend on wages to live, while shareholders often invest with money or assets they already have. If excess profits go only to shareholders, the gap between rich asset owners and workers can become bigger.

Rebuttals Fairness Requires Rewarding Investment Risk

Workers help a company succeed, but they are not the only group that contributes to the company's success. Shareholders also contribute by giving money to the company and taking financial risks. Without shareholders' investment, companies may not have enough money to build facilities, develop products, hire workers, or grow their business. Therefore, fairness should not focus only on workers' labor. It should also recognize investment and financial risk.

In terms of Social

1 Opposition argues that:

New Inequality Among Workers

Companies' excess profits should not go to workers before shareholders because this may create new unfairness among workers. Companies with large excess profits are usually big or very successful companies. Their workers often already receive higher wages and better benefits than workers in small businesses, subcontractors, or temporary jobs. If these workers receive large bonuses first, the benefit may stay only inside successful companies. This can make other workers feel left out.

Rebuttals Broader Fairness Begins with Rewarding Workers

The claim that excess profit sharing creates new unfairness among workers is limited. Even if workers in big companies already receive better wages, this does not mean they should be excluded from the profits they helped create. Fairness should first recognize the direct contribution of workers inside the company. Also, companies can design the policy to include subcontracted workers and temporary workers who helped the company's performance. Therefore, the real problem is not sharing excess profits with workers itself. The real problem is how fairly the system is designed.

Figure out the Clash Points VS ↔

In terms of Economic

2 Proposition argues that:

More Consumption and Productivity

Companies' excess profits should go to workers before shareholders because this can increase spending and productivity. Workers are more likely to spend extra money on daily needs, such as food, housing, education, and services. This means the money can return to the market faster and increase demand. Also, sharing profits with workers can improve their motivation and loyalty to the company. This can improve productivity and reduce turnover. Therefore, excess profit sharing is not just an extra cost. It can be an investment in workers.

Rebuttals Short-Term Consumption Does Not Guarantee Long-Term Growth

The claim that giving excess profits to workers increases spending and productivity is limited. Extra bonuses may increase short–term spending, but this does not always lead to long–term economic growth. Companies also need a lot of money for facilities, research and development, new technology, and future jobs. If excess profits are distributed to workers first, companies may have less money to prepare for future competition. Therefore, giving excess profits to workers may help consumption in the short term, but it can weaken long–term investment and growth.

In terms of Economic

2 Opposition argues that:

Less Investment and Growth

Companies' excess profits should not go to workers before shareholders because this can reduce investment and weaken long-term economic growth. If shareholders receive less reward, companies may become less attractive to investors. Investors may move their money to other companies or markets where they can earn higher returns. Also, once workers receive large bonuses, it may be hard to reduce them later, even when the economy gets worse. Then, companies may have less money for facilities, research and development, new technology, and future jobs.

Rebuttals Worker Rewards Are Also an Investment in Growth

The claim that giving excess profits to workers weakens long-term growth is limited. A company's growth does not depend only on shareholders, facilities, or technology. It also depends on skilled, motivated, and loyal workers. If workers feel that their contribution is recognized, they may work harder, stay longer, and care more about company performance. This can increase productivity and reduce turnover. Therefore, distributing excess profits to workers can also support long-term growth by strengthening workers.

DAY 3

Step 1: Finish Your Template

1. Prepare your arguments for both sides at home.
2. Listen to your friend's ideas and add the teacher's tips to complete your template.

Step 2: Practice with a Partner

1. Pair up with a classmate.
2. Take turns being Proposition and Opposition and role-play the debate, using your templates.

Mock Debate Drill

Government

The Government side proposes and defends the motion. The members of the Government side are the following:

1. PM (Prime Minister)

State that you support the motion and present one or two main arguments for the Government side.

2. DPM (Deputy Prime Minister)

Rebut LO's arguments and strengthen PM's Government-side logic. Add extra examples if needed.

3. GW (Government Whip)

Summarize the key issues of the debate and explain why the Government side is more persuasive. Do not add new arguments.

Opposition

The Opposition side refutes and negates the motion. The members of the Opposition side are the following:

1. LO (Leader of Opposition)

State that you oppose the motion and present one or two main arguments for the Opposition side.

2. DLO (Deputy Leader of Opposition)

Rebut PM's arguments and strengthen LO's Opposition-side logic. Add extra examples if needed.

3. OW (Opposition Whip)

Summarize the key issues of the debate and explain why the Opposition side is more persuasive. Do not add new arguments.

Prime Minister

Hello everyone, I am the Prime Minister. First, let me introduce to you the motion of the debate.

Today, I strongly support the motion that companies' excess profits should be distributed to workers before shareholders.

First, from a social perspective, workers help a company succeed. They make products, provide services, and keep the company running every day. Therefore, when a company makes more profit than expected, it is fair that workers receive some of those excess profits before shareholders.

Also, many workers depend on wages to live, while shareholders often invest with money or assets they already have. If excess profits go only to shareholders, the gap between rich asset owners and workers can become bigger. For example, the Samsung Electronics labor dispute in 2026 shows this point. Samsung reached a wage agreement with its labor union, and the agreement included performance bonuses. This shows that workers' contribution was reflected in the agreement.

Now let us look at the economic perspective. Distributing excess profits to workers can increase spending and productivity. Workers are more likely to spend extra money on daily needs, such as food, housing, education, and services. This means the money can return to the market faster and increase demand.

Also, sharing profits with workers can improve their motivation and loyalty to the company. This can improve productivity and reduce turnover. From a company's point of view, this is not just an extra cost. It is an investment in workers.

In conclusion, companies' excess profits should go to workers before shareholders. Workers help create company success, and sharing profits with them can improve fairness, reduce inequality, increase spending, and improve productivity. Therefore, companies' excess profits should be distributed to workers before shareholders.

Leader of Opposition

Hello everyone, I am the Leader of Opposition, and I stand firmly against the motion.

Today, I strongly oppose the motion that companies' excess profits should be distributed to workers before shareholders.

First, from a social perspective, giving excess profits to workers first may create new unfairness among workers. Companies with large excess profits are usually big or very successful companies. Their workers often already receive higher wages and better benefits than workers in small businesses, subcontractors, or temporary jobs. If these workers receive large bonuses first, the benefit may stay only inside successful companies. This can make other workers feel left out.

Also, shareholders should receive excess profits first because they provide money to the company and take financial risks. Without shareholders' investment, companies may not have enough money to build facilities, develop products, hire workers, or grow their business. If the company fails, shareholders can lose their money. Therefore, when the company earns excess profits, shareholders should be rewarded for their risk.

Now let us look at the economic perspective. Distributing excess profits to workers before shareholders can reduce investment and weaken long-term economic growth. If shareholders receive less reward, companies may become less attractive to investors. Investors may move their money to other companies or markets where they can earn higher returns.

Also, once workers receive large bonuses, it may be hard to reduce them later, even when the economy gets worse. Then, companies may have less money for facilities, research and development, new technology, and future jobs. For example, the Samsung Electronics performance bonus issue in 2026 shows this concern. The discussion about large bonuses came when the company also needed huge investment in semiconductor facilities, research and development, and AI-based automated factories.

In conclusion, companies' excess profits should not go to workers before shareholders. Fairness should recognize investment and financial risk. Also, companies need enough money for long-term investment and growth. Therefore, shareholders should receive companies' excess profits before workers.

Deputy Prime Minister

Hello everyone, I am the Deputy Prime Minister.

I will first rebut the Opposition LO's arguments and then reinforce the Government's position.

The Leader of Opposition argues that giving excess profits to workers first may create new unfairness among workers. However, this claim is limited. Even if workers in big companies already receive better wages, this does not mean they should be excluded from the profits they helped create. Fairness should first recognize the direct contribution of workers inside the company. Also, companies can design the policy to include subcontracted workers and temporary workers who helped the company's performance.

The Leader of Opposition also argues that shareholders should receive excess profits first because they provide money and take financial risks. However, fairness should not focus only on shareholders. Workers also help the company succeed by making products, providing services, and keeping the company running every day. Without workers, the company cannot create products or provide services.

Now let me reinforce the Government's position. From a social perspective, workers deserve a fair reward for their labor. Many workers depend on wages to live, while shareholders often invest with money or assets they already have. If excess profits go only to shareholders, the gap between rich asset owners and workers can become bigger.

From an economic perspective, distributing excess profits to workers can increase spending and productivity. Workers are more likely to spend extra money in the market, and this can increase demand. Also, when workers feel that their contribution is recognized, they may work harder, stay longer, and care more about company performance.

Therefore, companies' excess profits should be distributed to workers before shareholders. This policy can improve fairness and also support growth by strengthening workers.

Deputy Leader of Opposition

Hello everyone, I am the Deputy Leader of Opposition.

I will rebut the PM's arguments and reinforce the Opposition's position.

The Prime Minister argues that workers should receive excess profits first because they help the company succeed. However, workers are not the only group that contributes to company success. Shareholders also contribute by giving money to the company and taking financial risks. Without investment, companies may not have enough money to build facilities, develop products, hire workers, or grow their business.

The Prime Minister also argues that giving excess profits to workers can increase spending and productivity. However, short-term spending does not always lead to long-term economic growth. Extra bonuses may increase spending for a short time, but companies also need money for facilities, research and development, new technology, and future jobs. If too much excess profit is distributed to workers first, the company may have less money to prepare for future competition.

Now let me reinforce the Opposition's position. From a social perspective, fairness should also recognize investment and financial risk. Shareholders invest their own money and may lose it if the company fails. Therefore, when the company earns excess profits, shareholders should be rewarded for their risk.

From an economic perspective, companies need to remain attractive to investors. If shareholders receive less reward, investors may move their money to other companies or markets. This can make it harder for companies to raise money for future growth. Also, large bonuses can become a long-term burden if workers expect them again later.

Therefore, companies' excess profits should not be distributed to workers before shareholders. The real issue is not whether workers are important. The real issue is whether companies can remain fair to investors and strong enough for long-term growth.

Government Whip

Hello everyone, I am the Government Whip.

The Opposition argues that shareholders should receive excess profits first because they provide money and take financial risks. However, this argument focuses too much on financial risk and ignores workers' direct contribution. Workers give their time, labor, and skills to the company every day. Without workers, capital alone cannot make products, provide services, or keep the company running.

From a social perspective, workers deserve a fair reward for labor. Many workers depend on wages to live, while shareholders often already have money or assets to invest. If excess profits go only to shareholders, the gap between rich asset owners and workers can become bigger. Therefore, giving workers priority can improve social fairness and reduce inequality.

From an economic perspective, distributing excess profits to workers can increase spending and productivity. Workers are likely to spend extra income on daily needs, so the money returns to the market faster. Also, profit sharing can increase motivation, loyalty, and productivity. This means worker rewards are not just a cost. They are an investment in workers.

Therefore, the key issue in this debate is not whether shareholders deserve any reward. The real issue is whether the workers who help create company success should be ignored when excess profits are distributed. For these reasons, companies' excess profits should be distributed to workers before shareholders.

Opposition Whip

Hello everyone, I am the Opposition Whip.

The Government argues that workers should receive excess profits first because they help the company succeed. However, this argument overlooks the role of shareholders. Shareholders provide money to the company and take financial risks. Without their investment, companies may not have enough money to build facilities, develop products, hire workers, or grow their business.

From a social perspective, fairness should reward investment and risk, not only labor. If the company fails, shareholders may lose their money. Therefore, when a company earns excess profits, shareholders deserve to receive rewards for the financial risks they took. Also, giving excess profits to workers first may create new unfairness among workers because workers in big successful companies may receive large bonuses, while workers in small businesses, subcontractors, or temporary jobs may be excluded.

From an economic perspective, companies need investment for long-term growth. If shareholders receive less reward, companies may become less attractive to investors. Investors may move their money to other companies or markets where they can earn higher returns. Then, companies may have less money for facilities, research and development, new technology, and future jobs.

Therefore, the key issue in this debate is not whether workers are valuable. The real issue is whether companies should reduce investor rewards and long-term investment by giving excess profits to workers first. For these reasons, companies' excess profits should not be distributed to workers before shareholders.

Debate Instructions to Judges

DIRECTIONS:

In the Simson debate, the winning team is the one with the most points—there are no low-point wins. Use the guidelines below to determine your scores.

STANDARDS FOR SCORING:
Every speech is scored out of a possible 83 points.

Note: For purposes of consistency, scores should be between 67 and 83 for the three speeches per team. Judges should not go outside this range.

You may give or take away 1 or 2 points, per debater, for strong/weak offering and receiving of Points of Information.

81-83	• Brilliant arguments successfully engage with the main issues in the round. • Arguments are very well-explained, always central to the case being advocated, and demand extremely sophisticated responses. • The speech is very clear and incredibly compelling. Structure and role fulfillment are executed flawlessly.
79-80	• Very good, central arguments engage well with the most important issues on the table and are highly compelling; sophisticated responses would be required to refute them. • Delivery is clear and very persuasive. Role fulfillment and structure are probably flawless.
77-78	• Relevant and pertinent arguments address key issues in the round with sufficient explanation. • The speech is clear in almost its entirety, and holds one's attention persuasively. • Role is well-fulfilled and structure is unlikely to be problematic.
74-76	• Arguments are almost exclusively relevant, and frequently persuasive. Occasionally, but not often, the speaker may slip into: i) deficits in explanation, ii) simplistic argumentation vulnerable to competent responses, or iii) peripheral or irrelevant arguments. • The speaker holds one's attention, provides clear structure, and successfully fulfills their basic role on the table.
72-73	• Arguments are generally relevant, and some explanation of them given, but there may be obvious gaps in logic, multiple points of peripheral or irrelevant material and simplistic argumentation. • The speaker mostly holds the audience's attention and is usually clear, but rarely compelling, and may sometimes be difficult to follow. • There is a decent but incomplete attempt to fulfill one's role on the table, and structure may be imperfectly delivered.
70-71	• Relevant arguments are frequently made, but with very rudimentary explanation. • The speaker is clear enough to be understood the vast majority of the time, but this may be difficult and/or unrewarding. • Structure poor; poor attempt to fulfill role.
69	• The speaker is often relevant, but rarely makes full arguments. • Frequently unclear and confusing; really problematic structure/lack thereof; some awareness of role.
68	• The speech rarely makes relevant claims, only occasionally formulated as arguments. • Hard to follow, little/no structure; no evident awareness of role.
67	• No structure or fulfillment of role in any meaningful sense is provided, OR did not speak at all.

What is a POI?

A POI means **Point Of Information**
It is something you raise during the speech of your opponent when something in their speech doesn't add up or when you want a clarification to something they have said.

A POI is a very important part of a debate since you get to either rebut or question your opponents arguments or definitions in real time!

You may raise a POI by respectfully saying "point" and raising your right hand during your opponent's speech.

You may raise a point after your opponents first definition or argument.
If your opponent has not introduced any definitions or arguments you may not raise a point, since there is nothing to clarify in that case.

But, note that all speakers have the freedom to accept or reject any offered POI's.

So if your POI has been denied please respect the speaker for doing so.

Let's Make a POI!

↳ Example

Intro

I agree with the motion that companies' excess profits should be distributed to workers before shareholders.

Body 1

The most important reason is that workers deserve a fair reward for their labor.

I think this is important because workers help a company succeed. They make products, provide services, and keep the company running every day. Therefore, it is fair that workers receive excess profits before shareholders.

For example, the Samsung Electronics labor dispute in 2026 shows this point. Samsung reached a wage agreement with its labor union, and the agreement included performance bonuses. This shows that workers' contribution was reflected in the agreement.

Body 2

The next important reason is that giving excess profits to workers can increase spending and productivity.

I believe this matters because workers are likely to spend extra money on daily needs, so the money can return to the market faster. Also, sharing profits can improve workers' motivation and productivity.

For example, profit-sharing systems and employee stock ownership plans, or ESOPs, can make workers care more about company performance.

Conclusion

In conclusion, I agree with the motion because workers deserve a fair reward for their labor and giving excess profits to workers can increase spending and productivity. Therefore, companies' excess profits should be distributed to workers before shareholders.
